

Jacque J. Fong

Los Angeles, CA 90018 | (510) 209-8103 | jacquefong@g.ucla.edu | <https://www.linkedin.com/in/jacque-j-fong/>

Skills Summary

Statistics and Data Science student at UCLA leveraging 9 years of operational data analytics expertise in data integration, statistical modeling, and algorithmic thinking (greedy algorithms, graphs, nodes) to drive actionable insights. Proven strength in critical thinking, team management, and project leadership.

Technical Skills

Programming & Libraries:

- Python (NumPy, Pandas, Matplotlib/Seaborn), R, C++, Google Colab

Data Science & Statistics:

- Inferential Statistics, Correlation/Regression Analysis, Time Series, Data Visualization

Computer Science & Algorithms:

- Greedy Algorithms, Graph Theory, Big O Notation, Computer Vision, Image Segmentation, Feature Extraction

Data Engineering & Tools

- Multi-Modal Data Fusion, Data Cleansing, Database Management, Web Scraping, Analyst Notebook
-

Relevant Experience

Team leader sergeant / Signal Intelligence Analyst, United States Army, Pleasanton CA, 11/2014 - 12/2023

- Managed multi-source intelligence fusion projects (SIGINT, GEOINT, ELINT) to construct integrated operational datasets. Applied statistical analysis to complex datasets, compiling actionable, data-driven reports for CENTCOM operations.
- Leveraged 9 years of leadership experience, training and managing technical teams of 20+ personnel in data collection and intelligence processing protocols.

Data Science Intern, Spotlist.inc, New York City NY, 2023

- Produced robust datasets by webscraping and collaborating with multiple departments, utilizing tools such as Google Colab.
-

Technical Projects

Computer Vision: Image Segmentation and Feature Extraction

- Developed a Python-based Computer Vision tool utilizing Image Segmentation (Felzenszwalb/Blob Analysis) to perform Feature Extraction, preprocessing images for machine learning consumption and demonstrating core algorithmic understanding.

Statistical Modeling for Psychophysiology Research

- Designed a statistical system utilizing Inferential Methods (e.g., t-tests or ANOVA) to quantify the correlation between visual stimuli and memory recall effectiveness in a psychophysiology study.

Exploratory Data Analysis (EDA) and Correlation Mapping

- Conducted Exploratory Data Analysis (EDA) on a large dataset using Python; calculated and mapped all pairwise Pearson correlation coefficients (r), identifying statistically significant relationships to inform predictive modeling inputs.
-

Education

B.S. Statistics & Data Science, Data Science Engineering Minor, University of California, Los Angeles, Expected 2027

Statistics A.S., West Valley College, 2025

Defense Language Institute, Monterey CA, 2018 - 2019
